

As a Solar Energy Developer, we are responsible for assembling the right team to get a project completed on time and within budget. While overall costs are always important, it is not the only factor we consider when choosing a solar contractor (EPC) to complete our rooftop solar energy projects. Equally important to cost is confidence – are we confident in a company’s solar installation experience, roofing knowledge and flexibility to overcome construction challenges?

We have worked with AGT Solar since 2009 and are confident in their work. We have been happy with the results, as have our clients. The proposals that AGT Solar provide to us are complete, accurate and transparent; enabling us easily work with the information when bidding on projects. This is a key component to us becoming one of the largest solar developers under the Ontario Power Authorities Feed in Tariff program.

To date, AGT Solar has completed 12 commercial rooftop solar energy projects for us on a variety of roof systems; totaling +4 Megawatts. Each project had unique construction challenges from extreme weather conditions to structural issues. However, regardless of how difficult the challenge may have been, AGT Solar was able to complete each project successfully. And, since AGT Solar considers safety as important as timeliness, we have no reservations when they are on the job site; ultimately making our job easier.

Moose Power recommends AGT Solar to anyone who wants a superior quality commercial solar installation, on time and on budget, with no surprises.

Sincerely,

Scott McLorie
Director of Operations
