Attention: David Goodman

Dear Mr. Goodman,

Nautilus Solar Energy, LLC (Nautilus) is pleased to recommend Advanced Green Technologies (AGT) as an honest, reliable, problem-solving solar EPC.

As of this writing, AGT has functioned as EPC for us for a total of 4.7 megawatts (MW) on eight commercial rooftop solar photovoltaic (PV) projects in Ontario, Canada and the United States. To date, seven of the eight projects have been successfully installed; the final project will be commissioned in summer 2012. When developing and constructing a commercial rooftop solar PV project, the EPC needs to be both rigid, to schedule and cost, and flexible, to address the unexpected. AGT combines these distinctly opposite qualities, allowing it to complete projects on time and on budget, all while being a professional organization to work with.

The Nautilus team appreciates the effort and the results.

Sincerely,

A handwritten signature in black ink, appearing to read "James M. Rice", is written over the typed name and title.

James M. Rice
