Syscom Tech is pleased to recommend Advanced Green Technologies (AGT) as a professional and problem-solving solar energy contractor. We hired AGT in 2011 to design, procure, and install a 156 kilowatt solar photovoltaic (PV) system on the roof of our headquarters in Moorestown, New Jersey.

Prior to installing the solar PV system our project faced several obstacles, including needing a new roof and having to start construction on the PV system by the Federal 1603 Grant installation deadline. AGT's team was able to design, schedule, and mobilize to complete everything within our short timeline. Not only did we get our grant money, AGT was able to leverage its roofing experience to re-roof our facility using an energy-efficient TPO roof system.

To date, the combined re-roof and solar energy system are saving us money, which in turn has allowed us to increase production at our facility without noticing a huge jump in our energy bills.

We appreciate AGT's hard work and recommend them to anyone looking for a reliable and creative solar energy contractor.
