SUBJECT: MT. OLIVE DISTRIBUTION CENTER SOLAR INSTALLATION
DATE: 9/6/2011

First and foremost I would like to personally thank you and your team for what I have declared a flawless installation of 37,414 solar panels which signifies the completion of North America's largest operational solar rooftop installation at 5.38MW.

In the beginning I admit that I had my reservations whether or not the installation could be completed within the extremely limited time frame of less than 5 months, however AGT's commitment to success was no match for the compressed schedule. AGT met the challenge head on by adjusting work crews to the construction demand in order to maintain critical paths and coincide with the electrical contractors ensuring a timely completion.

As I am well aware of the issues associated with aggressive construction schedules, I am even more aware that in many cases quality suffers and results in safety issues or even injuries. I am extremely proud to say that the quality was exactly the opposite, improving as construction progressed, and I am even happier to say that AGT did so without compromising safety. In fact, throughout the entire construction process there were zero incidences of injury or safety violations.

I am extremely proud to have worked with a construction crew as diligent, professional and committed as the one led by Ed Murton on behalf of AGT. Ed Murton's communication and work ethic clearly reflects the company's commitment to productivity and site management that was critical to the success of the project.

I would once again like to congratulate you and your company for the success of this project and wish AGT continued success in their future endeavors.

Kind Regards,

Kyle Bartz
