To Whom It May Concern:

The Cresskill Board of Education strongly recommends the work of Advanced Green Technologies (AGT). AGT was hired to design and construct a 513 kilowatt (kW) solar photovoltaic (PV) array on the roof of the Middle and High School Buildings in Cresskill, New Jersey.

AGT completed the project on time and on budget, with no safety incidents. The installed solar system is operating as planned, and producing clean energy for our schools. Like all construction projects, ours had its challenges. In October 2011, Cresskill was hit by a massive snow storm that caused a shutdown of the solar installation work. AGT's team worked diligently to compress the balance of the schedule, including coordinating an afterhours interconnection with the local utility company, to meet the construction deadline and avoid disrupting school operations. During the entire project, AGT's personnel were professional and easy to work with, especially Sam Sicoli, the project manager and Edward Murton, the construction manager. They communicated openly and collaboratively with the school staff.

Besides the clean energy for our schools, the Data Monitoring System AGT installed in our Science Lab provides a real time assessment of the energy being created and serves to inspire our students to pursue paths in math and science.

Sincerely,

Antoinette Kelly

Business Administrator/Board Secretary

The Cresskill Schools will utilize the core curriculum content standards to promote academic excellence and foster self-esteem in a dynamic, caring environment and will prepare students to be life-long learners and contributors in an evolving and ever-changing world.
